

To run this application

- Please install XAMPP server and create a mysql database named battleground.

You may download XAMPP via <https://www.apachefriends.org/download.html>

-
- please make sure that you have downloaded the NodeJS version v20.17.0 and run the following command to install all the necessary packages.

npm install

- In order to install all the node modules and then run two commands below for database migration

```
npm run premigrate  
npm run migrate
```

Finally we're ready

Now run the below command and access the server via <http://127.0.0.1:3000/explorer/#/>

```
npm run start
```
